Part 1: The science of palaeontology	
1.1 Preface: the fascination of fossils	2
1.2 A chancy business: the preservation of fossils	5
1.3 From the field to the laboratory: how to collect, curate and study fossils	10
1.4 Code of conduct for fossil collectors	16
1.5 Taxonomy: how to classify and identify fossils	18
1.6 Uses of fossils	21
1.6.1 Palaeobiological history of life on Earth	21
1.6.2 Evolution and extinctions	27
1.6.3 Interpretation of ancient environments and climates	31
1.6.4 Biostratigraphy and the concept of zone fossils	36
1.6.5 Development of the geological timescale	39
1.7 Fossil Lagerstätten: exceptional preservation of fossils	42
1.8 Early ideas on the nature and significance of fossils	51
Part 2: Fossil groups	
2.1 Algae and vascular plants	56
2.2 Unicellular animals: Foraminifera and Radiolarians	62
2.3 Sponges	65
2.4 Cnidaria	68
2.5 Bryozoans	72
2.6 Molluscs	76
2.6.1 Cephalopods	77
2.6.2 Gastropods	82
2.6.3 Bivalves	84
2.6.4 Other Molluscs	86

2.7	Brachiopoda	89
2.8	Echinodermata	92
2.8.1	Echinoids and Edrioasteroids	93
2.8.2	Crinoids and Blastoids	96
2.8.3	Starfish, Brittlestars and Homalozoans	99
2.9	Arthropods	101
2.9.1	Trilobites	101
2.9.2	Crustaceans (Crabs, Shrimps and Ostracods)	104
2.9.3	Chelicerates (Horseshoe Crabs, Eurypterids and Spiders)	107
2.9.4	Insects	108
2.10	Graptolites	110
2.11	Conodonts	114
2.12	Fishes	117
2.13	Tetrapods and Amphibians	121
2.14	Reptiles	123
2.15	Birds	129
2.16	Mammals	131
2.17	Hominids and Hominins	134
2.18	Trace Fossils	137
	Glossary	141
